

A skilled DevOps Engineer with expertise in cloud infrastructure, CI/CD pipelines, and automation, aiming to leverage knowledge of AWS, Kubernetes, and Terraform to enhance system scalability, reliability, and operational efficiency.

Profile Summary

- Results-oriented **DevOps Engineer** with over **1 years of experience** in cloud infrastructure and CI/CD pipelines, specializing in optimizing system scalability and reliability for high-traffic environments.
- Certified **AWS Solutions Architect – Associate**, with a strong foundation in cloud architecture and security, ensuring efficient and secure cloud deployments.
- Proficient in leveraging **AWS and GCP** for cloud solutions, combined with hands-on expertise in automation tools like Terraform and container orchestration with Kubernetes.
- Experienced in **backend development** using Python (FastAPI), Java (Spring Boot), and related frameworks, contributing to scalable & performant application architecture.
- Strong understanding of **networking protocols (HTTP, DNS, REST APIs)** and scripting languages including **Python, Bash, and Shell**, enabling seamless integration and automation.
- Actively participating in **industry conferences and cloud computing meetups**, expanding professional network and staying updated with the latest trends.
- Experience in **MLOps**, designing and managing machine learning pipelines on cloud platforms like GCP, ensuring efficient model deployment and lifecycle management.
- Adept at **collaborating with cross-functional teams**, including developers, QA, and security teams, to ensure seamless software delivery and system reliability.

Work Experience

DevOps Engineer | Ilumina Health Pvt. Ltd. | Nov'24 – Present

- Cloud Infrastructure Automation:** Architecting scalable cloud environments using Terraform and AWS EC2, accelerating environment provisioning by 40% and enhancing resource optimization.
- Multi-Region Deployment:** Spearheading microservices deployment across three regions via Kubernetes, achieving a 60% reduction in latency and expanding system capacity to handle 4x traffic.
- CI/CD Pipeline Optimization:** Designing and optimizing robust CI/CD pipelines with GitHub Actions and Docker, slashing application startup time by 50% and streamlining deployment workflows.
- Regulatory Compliance:** Enforcing ISO/IEC 27001 compliance through automated lint checks, fortifying cloud infrastructure security and maintaining regulatory adherence.
- Monitoring and Incident Management:** Implementing proactive monitoring using Grafana and New Relic, swiftly identifying performance issues and minimizing downtime.

Technical Skills

• Programming Languages: Python, Bash, Java, Shell Script, Node.js
• Infrastructure as Code (IaC): Terraform
• Cloud Platforms: AWS (Amazon Web Services), GCP (Google Cloud Platform)
• DevOps Tools: Kubernetes, Docker, Git, CI/CD, Jenkins, Grafana, New Relic, Ansible, JIRA
• MLOps Tools: Google AI Platform, GKE (Google Kubernetes Engine), EKS (Elastic Kubernetes Service)
• Databases: MySQL, PostgreSQL
• Networking: HTTP, DNS, RESTful APIs, JSON, XML, TCP/IP

Core Competencies

Cloud Infrastructure Management
Continuous Integration & Deployment (CI/CD)
Automation & Process Optimization
Scalable System Architecture
Cloud Security & Compliance
Cross-Functional Collaboration
Operational Efficiency Enhancement
DevOps Strategy Implementation
System Reliability & Monitoring
Performance Tuning & Optimization

Education & Credentials

- B.Tech in CSE-Data Science**
 - Raghu Engineering College,
 - Visakhapatnam, Andhra Pradesh, 2024

Projects

Ilumina Health – WhatsApp Chatbot

Description: Implemented CI/CD pipelines and automated infrastructure (AWS SQS, Lambda, and ECS) for WhatsApp Chatbot, ensuring scalable, reliable message delivery and reducing deployment time by 60%.

Orchestrated containerized services using Docker and AWS ECS, enabling seamless scaling and high availability for the chatbot backend.

Monitored system performance with CloudWatch and implemented automated alerts, proactively reducing downtime and ensuring 99.9% uptime.

Integrated infrastructure-as-code (IaC) using AWS CloudFormation/Terraform, streamlining deployments and ensuring reproducible environments across dev, staging, and production

Personal Details

Languages Known: English
Address: H.B colony, Visakhapatnam, Andhra Pradesh, India
